

SAVE VALUABLE TIME

With the NK300S Boiler Feed
Feed Combination Valve

NK300S Boiler Feed
Combination Valve

NK300S Boiler Feed Combination Valve

Reduce installation costs and save time by using one product that integrates multiple solutions.

The NK300S Boiler Feed Combination Valve combines a testable back flow preventer with a pressure-reducing boiler fill valve. This feature rich product contains a strainer, pressure gauge, two shutoff ball valves, and test ports to save you time and money. It's exactly what every residential, light commercial or multi-family building with a boiler needs to speed up installation, checkout, and maintenance visits.

**A TRUE
TIMESAVER!**

FEATURES & BENEFITS

- Multiple solutions integrated into one product provides savings on installation time and material costs
- Test ports located on the inlet, middle, and outlet chambers of the double check backflow preventer
- Fast fill technology with inlet pressure balancing
- Removable and replaceable cartridges for easy service and/or cleaning
- Integrated strainer to protect equipment from particles and sediment
- ASSE 1081 approved

Faster & Safer Refilling

With isolation shut-off valves upstream and downstream, servicing the system is easy. It's no longer necessary to drain the entire unit. Adjustable outlet pressure and the inline pressure gauge allow for quick and easy checkout.

Product	Connection Type	Model #
